

TRI-METAL XR Extra Response Hybrid

Tri-Metal Technology brings you an extremely forgiving, high performance hybrid. The Tri-Metal XR Hybrid uses multi-metal engineering to bring together 17-4 stainless steel, high density tungsten, and super strong maraging steel for exceptional performance and maximum forgiveness. That's why it's called XR (Extra Response). This easy-to-hit game improvement club gives you the confidence to go for shots that take both accuracy and distance control. Next time you need to carry that water to get your birdie, swing the Tri-Metal XR Hybrid with confidence.

- High-performance stainless body
- Impact-reactive maraging face
- Neutral Tungsten sole weight
- Golf Pride® New Decade grip
- Powered by Aldila® graphite shaft
- Matching head cover

Orlimar® Pro Series Aldila® Graphite Shaft

Golf Pride® New Decade Grip

Head Cover

Features & Benefits

- **Optimal Loft Choices.** The Tri-Metal XR Hybrids are available in #3 19° and #4 22° lofts, making it easy to fit the perfectly lofted club into your set.
- **Tungsten Sole Weights for Improved Launch Properties.** A super-dense tungsten weight is strategically imbedded in the heel and toe of the sole. This discretionary weight distribution to a lower and deeper position promotes lower spin and a higher launch angle. Paired with the latest ball technology, these attributes produce a longer more penetrating ball flight.
- **17-4 Stainless Superior Strength Body.** The Tri-Metal XR Hybrid head is comprised of 17-4 stainless which has high chromium content for a brilliant finish, solid feel, and gratifying sound.
- **Stainless Maraging Steel Face For Superior Performance.** 13% lighter than stainless steel, maraging steel is extremely strong and light. The weight that is saved on the face can be relocated to the sole, aiding both trajectory and forgiveness. When Orlimar's engineers combine the unique properties of these high-performance metals with superior technology, the result is an extremely easy-hitting hybrid.
- **Pro Series Aldila® 60 Low-torque Shaft.** The Tri-Metal XR hybrid is powered by the Aldila 60 Pro Series low-torque shaft. These shafts are performance-matched to the head's unique properties. The shaft's torque, or resistance to twisting on the downswing, is optimized to withstand centrifugal swing forces. This provides the golfer with the accuracy of square impact while still allowing the shaft's flex-response to impart maximum force through impact.
- **Golf Pride® New Decade Rubber Grip.** With a new look and feel, these grips utilize an innovative composite rubber formula for all weather control. Made especially for Orlimar, these all black grips have the Orlimar logo on the cap-side and lower-hand area. With the dominant grip on the PGA Tour, Golf Pride remains the right choice for performance.
